Frontend Developer

Company: Basket Lane Technologies
Location: Bengaluru, India (hybrid)
Employment type: Full-time

About us

Basket Lane is an online marketplace for local shops, used by 2 million shoppers every month. Our product team ships small improvements every day.

About the role

We are looking for a Frontend Developer to build fast, accessible pages for our shopping and checkout experience. You will work with designers, backend engineers and product managers in a small Agile team.

Responsibilities

- Build user interfaces in React and TypeScript
- Write clean, semantic HTML and CSS that works on every screen size
- Integrate with REST API and GraphQL services built in Node.js
- Write unit tests and take part in code reviews
- Improve page speed and accessibility

Requirements

- 3+ years of experience in frontend development
- Strong React, TypeScript and JavaScript
- Solid HTML and CSS skills
- Experience working with REST API services
- Git and GitHub for version control
- Good communication and problem solving skills

Nice to have

- GraphQL
- Docker
- Experience in Agile or Scrum teams

What we offer

- Health insurance and a yearly wellness allowance
- Latest laptop and home office setup
- Two learning days every quarter

How to apply

Share your resume and a link to something you have built.
