Senior Backend Java Developer

Company: Ledgerly Payments
Location: Bengaluru, India (hybrid)
Employment type: Full-time

About us

Ledgerly processes payments and refunds for 400 online businesses. Reliability and security matter in everything we build.

About the role

We are hiring a Senior Backend Java Developer to build scalable microservices for our payments platform and to mentor junior developers.

Responsibilities

- Design and build microservices in Java and Spring Boot
- Design REST API contracts used by partner banks and merchants
- Tune PostgreSQL and MySQL databases for high volumes
- Run services on Docker and Kubernetes with Jenkins CI/CD pipelines
- Review code and mentor junior developers

Requirements

- 5+ years of experience in backend development
- Strong Java and Spring Boot
- REST API design
- PostgreSQL or MySQL
- Docker, Kubernetes and CI/CD with Jenkins
- Linux and Git
- Leadership skills to mentor others

Nice to have

- Kafka or other messaging systems
- Agile delivery experience
- Experience in payments or banking

What we offer

- Health insurance and yearly bonus
- Employee stock options
- Flexible hybrid working

How to apply

Send your resume and tell us about a system you made faster or more reliable.
